

Tips for Use

If you want to clean the panels from dust or fingerprints, use only dish soap or mild soap and a soft microfiber cloth to avoid scratching the acrylic surface.

The best visual effect is achieved when the lamp is placed against a dark background.

The future of your lamp

I designed the lamp to be constantly evolving. I am working on Firmware V2, which will change the way you use the device.

You will be able to install the update yourself, without sending the lamp back. Scan the QR code to track progress on GitHub:

What's coming in V2 ?

- App & Bluetooth: Full control directly from your smartphone.
- Schedules: Automatic operation on selected days and times.
- Custom Mode: Create your own custom light compositions.

USER MANUAL

**YOUR IDEA IN RGB
LIGHT**

Assembly & Startup

Panel Preparation

Take the acrylic panels out of the box and gently peel off the protective film from both sides.

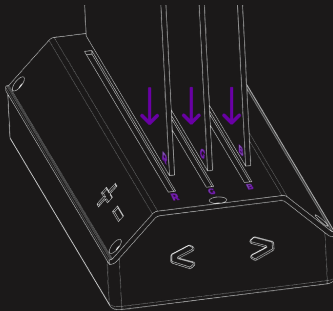

Be careful not to leave fingerprints on the panels.

Installation

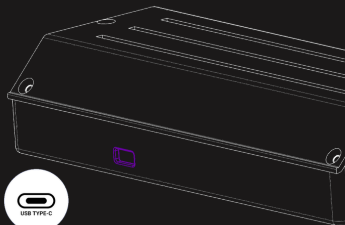

Pay attention to the markings at the bottom of each panel.

Match them to the corresponding slots in the lamp base (each slot corresponds to a different RGB color component) and push the panels all the way in.

Power Supply

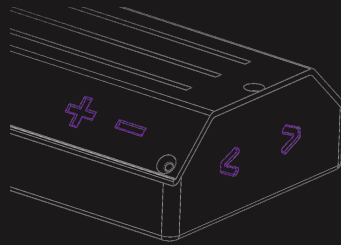

Connect the lamp with a USB-C cable to a wall charger. A charger with a current output of over 1A is recommended.

If you plug in a weaker power supply, the device will automatically detect the issue and perform a calibration.

Lamp Operation

Buttons

The lamp is equipped with 4 touch buttons. They support short taps and long holds.

Short single tap

Long hold ~ >3s

Hold one button while tapping another

Basic Functions

Function	Button	Action
Change animation	 or 	Switches to the previous or next effect
Change parameter 1	 or 	Changes the first parameter of the current animation (e.g., speed)
Change parameter 2	 with  or 	Changes the second parameter of the current animation (e.g., brightness/color)

Advanced Functions

Sleep Mode (Daily)

Activation:  ~ 5s
 Tapping any button immediately wakes up the lamp.

The lamp turns off, but remembers the turn-off time. The device will wake up automatically after the time set in the settings. After waking up, the lamp will automatically go into sleep mode at the same time it was put to sleep the previous day.

Time Configuration

Enter animation time setup:   ~ 3s In this mode, the number of lit LEDs indicates the selected value.

Enter sleep time setup:   ~ 3s The time is changed using:

Exit time setup mode:     or 

2x    

1x  

For sleep mode, each lit LED equals 1h (min 0h - permanent sleep, max 20h).  Once a row is full, the next LEDs will change color.

For animation mode, each lit LED equals 15 min (min 15 min, max 5h).

Device Reset

To reset the lamp and restore factory settings, follow the instructions below:

Step 1:   ~ 3s

Step 2:   ~ 10s

During the reset process, after five seconds, the lamp will start a countdown using red LEDs. It will then return to factory settings, followed by a device reboot.

Auto-Cycle Animations

Turn On/Off:

  ~ 3s

The lamp will automatically cycle through lighting effects at a specific time interval.
